

What Is Claimed Is:

1. A real-time personalized E-book editing service method through the Internet, comprising the steps of:

5 allowing a registered member to log on his or her account to receive commodity contents from an operator server;

allowing a registered member to purchase a desired commodity and searching/selecting a desired data, from the
10 transmitted commodity contents, and then send the selected data to the operator server;

transmitting an image data of the selected commodity to the registered member in real time;

allowing a registered member to directly compose and
15 edit the image data of the transmitted commodity and an image of the registered member picked up using a web camera, and then send the composed image to the operator server; and

evaluating the composed image produced by the
20 registered member, storing the image at the member's account as an E-book and then transmitting the E-book to the registered member every time when he or she requests the E-book.

25 2. The method as claimed in claim 1, further comprising the step of temporarily storing the composed image of the commodity produced by the registered member as the E-book before the image is stored at the member's account.

30

3. The method as claimed in claim 1 or 2, wherein the commodity includes a fairy tale, animation, a movie and

a drama, and is a still picture of one frame for the commodity.

4. The method as claimed in claim 1, further
- 5 comprising the step of writing the stored E-book on a compact disk and then delivering the compact disk offline, at the request of the registered member.
